Public Transport GIS Assignment 1

A091005 周秉宇

Task 1

Notes:

觀察出圖的結果,您覺得哪裡還可以再調整,以提升視覺化呈現

- 1. 改以人口點圖(散布圖或隨機點子圖)或密度面量圖顯示以避免誤判
- 2. 以其他顏色繪製周圍的直轄市/縣界輪廓

補充說明程式碼撰寫問題,若出現錯誤訊息也請貼上

- 玩了一下 Windows 的字體問題,發現一定要透過 windowsFonts 來解決
- 一開始誤會 fill 跟 color 的差異,另外對於 aes、+、%+% 等 ggplot2 的使用也不是太理解,有遇到一些小問題
- 好奇 scale_fill_distiller 跟 scale_fill_brewer 的使用方式詳情

Notes:

觀察出圖的結果,您覺得哪裡還可以再調整,以提升視覺化呈現

- 1. 調整 label 位置
- 2. 調整配色、車站大小

補充說明程式碼撰寫問題,若出現錯誤訊息也請貼上

- ggsfrepel 實在是非常難纏
- 原先以為 dplyr 的可以吃,所以雖然測試時用了 vectorized 的 filter 函數,但後來去掉之後就 噴錯了

警告訊息:

1: 於 st_point_on_surface.sfc(data\$geometry):
 st_point_on_surface may not give correct results for longitude/latitude data
2: 於 st_point_on_surface.sfc(data\$geometry):
 st_point_on_surface may not give correct results for longitude/latitude data
3: 於 st_point_on_surface.sfc(data\$geometry):
 st_point_on_surface may not give correct results for longitude/latitude data
4: 於 st_point_on_surface.sfc(data\$geometry):
 st_point_on_surface may not give correct results for longitude/latitude data
5: ggrepel: 5 unlabeled data points (too many overlaps). Consider increasing max.ov
6: ggrepel: 8 unlabeled data points (too many overlaps). Consider increasing max.ov
7: ggrepel: 5 unlabeled data points (too many overlaps). Consider increasing max.ov
8: ggrepel: 5 unlabeled data points (too many overlaps). Consider increasing max.ov
